Week Starting:	12/10/2026 TO 18/10/2026			
Meeting Details	**START TIME**		**END TIME**	
Student Name:	Yuliia Antonova			

Description of work completed since previous meeting Notes : Also record project backlog, use notes page as required
Completed the main interactive lifecycle for the Digital Plant prototype in Three.js. The user can plant a seed, adjust water and light, watch the plant germinate and grow, see the flower open and wither, and collect seeds. After collecting the seeds, the plant resets and the user can start the cycle again. Tested the complete cycle from planting through seed collection and repeat planting. Created a storyboard showing the main lifecycle stages and additional possible interactions.

Tasks to be completed this week **Notes: record any additional tasks on notes page as required.**	
1	Test the full lifecycle repeatedly and check that the reset works consistently.
2	Refine the reset state so the plant, flower, leaves, and controls return cleanly to the starting state.
3	Capture screenshots of the main lifecycle stages for project documentation and presentation.
4	Update the weekly project report and add the storyboard to the project documentation.
5	Review the prototype for visual or interaction issues and record any remaining bugs.
6	Commit the latest working prototype and documentation to the project GitHub repository.
