Week Starting:	05/10/2026 TO 11/10/2026			
Meeting Details	**START TIME**		**END TIME**	
Student Name:	Yuliia Antonova			

Description of work completed since previous meeting Notes : Also record project backlog, use notes page as required
Defined the Digital Plant storytelling concept and the lifecycle sequence: seed, germination, growth, bud, flowering, seed formation, withering, and death/renewal. Prepared an interaction table, lifecycle diagram, and development plan. Updated and tested the Three.js prototype with Water and Light controls, a plant-condition indicator, colour changes, and experimental leaf-drooping behaviour. Retained the existing rotating stem and leaf-click interaction. Leaf-drooping still needs refinement.

Tasks to be completed this week **Notes: record any additional tasks on notes page as required.**	
1	Refine leaf drooping and recovery so all leaves respond consistently.
2	Define how Water and Light affect growth rate and plant condition.
3	Plan Seed and Germination as the first lifecycle stages to implement.
4	Create a simple storyboard showing the stages and viewer actions.
5	Explore or model the next plant element: seed, bud or flower.
6	Test the prototype and capture screenshots of interaction and condition changes.
